

4 SIDES OF COMMUNICATION

TPP TOOLBOX

Schulz von Thun

Four sides model of communication: Communicate effectively to achieve intended effects

Every message/statement **has a sender and receiver** and **consists of four sides**:

The same message can have a different meaning and produce unintended effects, depending on the receiver's understanding

The same message can have a different meaning and produce unintended effects, depending on the receiver's understanding

CIRCLE OF INFLUENCE

TPP TOOLBOX

Why bother?

Limitations of influence - Stephen Covey's „Three Circles“: Increased effectiveness, productivity, satisfaction and stress reduction

MEP

TPP TOOLBOX

Managing Expectations for Performance

Managing Expectations for Performance (MEP): Working together effectively means clearly formulating and following up on expectations

Recap:

- Sender can take an informal leadership role
- Exertion of influence through social legitimization
- Employing connectivity, role modeling and information
- Applying the PDCA / „Inspect & adapt“ principle

Key is to anticipate potential problems or conflicts that prevent achieving a desired outcome in a structured dialogue

Consideration:

- What needs to be done?
- What do I need in order to do it?
- What is in it for me?
- What could keep me from doing it?

Potential problems or conflicts can be classified into four categories: Cognitive, motivational, competence-based and environmental

MEP can be a powerful cooperative leadership tool – especially in situations of uncertain expectations (VUCA)

Questions and tactics for resolving potential problems/conflicts in the four categories

Lack of understanding (Cognitive)	Lack of motivation (Motivational)	Lack of knowledge/skills (Competence-based)	External roadblocks (Environmental)
▪ Is a clear and comprehensive context and reasoning available (urgency or contribution to a larger goal)? ▪ Is there clarity regarding objective, approach and the recipient's role? ▪ Is there clarity regarding expected output vs. outcome? ▪ Is there clarity on timing and a „definition of done“?	▪ Does the request match the recipient's current role and responsibilities? ▪ Does the request possibly contribute to the recipient's personal and professional ambitions? ▪ Does the recipient benefit in other ways by contributing – which ones? ▪ Does the recipient feel equipped and empowered to contribute to the expected result?	▪ Does the recipient have all information required to contribute? If not, how can they be provided / acquired? ▪ Does the recipient have the skills required to contribute? If not, how can they be provided / acquired? ▪ Is external support required to fill competence- or knowledge-gaps?	▪ Are there external blockers or constraints that need to be resolved or negotiated, e.g. budget, timing, norms? ▪ Are there conflicts of interest or priority (e.g. strategic) that require a management decision? ▪ Are there unexpected developments that need to be considered (e.g. sickness in the team, security-related events etc.)

HANDLING CONFLICTS

Strategies for Conflict resolution
Thomas Kilmann

HANDLING CONFLICTS

Understanding the nature of conflicts and the circumstances surrounding them is an important prerequisite for resolving them

HANDLING CONFLICTS

Classification of the five types of conflict with possible solutions

- Factual level -

- Psycho-social level -

	Goal conflict	Evaluation conflict	Distribution conflict	Relationship conflict	Role conflict
Classification	» Can quickly shift to the relational level (power/status). » Dilemmas are not "solvable" per se.	» Can be exacerbated by asymmetric communication and "exclusive knowledge."	» Can quickly shift to the relational level (power/status).	» Difficult to address, as it may be hidden and have a "backstory." » Trigger often at factual level.	» Often begins at the factual level (e.g., unclear responsibilities) and then shifts to the personal-social level (e.g. identity, recognition).
Approach to a solution	» Prevention, e.g., through values, vision, strategy » Agree on a hierarchy of goals or possible alternative solutions ("BATNA"). » Structured search for a common solution in the best interests of the company.	» Open communication and clarification of expectations (binding agreement). » Exchange of knowledge and experience among all parties involved to establish a common decision-making framework.	» Check whether the argument is still factual vs. a "power issue" (relationship/role conflict) » Prevent conflicts through clear and transparent guidelines in the context of, e.g., vision, strategy, goals, and values.	» Return to the factual level as much as possible. » Establish and adhere to rules of discussion, and clarify points of contention. » Communication: Address expectations clearly and respectfully.	» Clearly communicate your own understanding of your role (Johari). » Make roles and expectations transparent (delegation, MEP). » Actively assume your role: Explain your intentions and ask for agreement ("Intent").

HANDLING CONFLICTS

Basic strategies for conflict resolution (Thomas Kilmann)

STAKEHOLDER MANAGEMENT

TPP TOOLBOX

Stakeholder Matrix & Sociogram

STAKEHOLDER MAPPING

Stakeholder Matrix: Classifying individual stakeholders by influence, interest, and appropriate tactics

STAKEHOLDER MAPPING

Making connections visible: From the Stakeholder Matrix to a dynamic network of relationships

Key questions: Where do recurring frictions arise? Where do conflicting expectations exist? And what roles, formats, or decisions could help turn these tensions into productive forces?

Concrete design impulses:

Mapping areas of tension:

Don't just model processes; consciously highlight the key lines of conflict.

Define bridge roles:

Identify individuals who can speak “between worlds”—and formally recognize this role.

Establish routines:

Create transparency regarding dependencies and help resolve them, rather than merely increasing local efficiency.

STAKEHOLDER MAPPING

Sociogram: Assessing stakeholders based on their relationships with one another (e.g., team dynamics)

- » A sociogram helps visualize organizational dynamics and explore different perspectives ? areas of tension, bridge roles, routines
- » Make sure the sociogram doesn't become too complex. A model can never capture all aspects and details of reality.
- » Instead, focus on the most important aspects you want to analyze and clarify (people, their relationships/ interactions, etc.).
- » Use symbols or labels of your choice to aid in the visualization.
